AB PURPOSE: To allow the user to confirm the end of transmission or the
occurrence of a transmission error even when the user
leaves the facsimile equipment during the transmission
of an original.
CONSTITUTION: When an extension number is entered by using a ten-key of an
operation panel 3 during transmission of an original, the extension number
is stored in an extension number data storage area 12a of a RAM 12. At the
end of transmission of an original, a CPU 10 reads the extension number
and an NCU 16 sends a dial pulse to the extension telephone set and the
CPU 10 upon the receipt of the arrival of a call uses a voice synthesis
circuit 14 to inform the end of transmission or a transmission error.
